

LOGICON

PENETRATING CONCRETE SEALER

Logicon is simple to apply with a lambs wool applicator or paint roller. A second coat cures to a beautiful satin sheen.

Logicon is a penetrating sealer and conditioner that is highly resistant to abrasions, impact, acids, alkali, fumes, gases, oil, grease, gasoline, ink, fruit juices, cleaning materials, alcohol and moisture. Use to seal and protect terrazzo and concrete against wear, stains, grease and extraneous moisture in one easy operation.

For an extremely long lasting concrete finish, Logicon is the logical choice. This sealer actually penetrates into the concrete surface one quarter inch or more to give you absolute protection against grease, oil, gasoline, salt and a host of others in one easy application. Logicon will actually prevent moisture from penetrating above and below the surface. Logicon is non-slip and becomes part of the concrete; the impervious shield can only be defeated by gouging beneath the 1/4 inch penetration.

If you are looking for extreme long lasting protection in high traffic

areas which experience much abuse including rock salt and chemical ice-melters Logicon is the best option.
